Econometrics Report

Facts

- Model: OLS (robust SE)
- y = wage; X = education, experience, region
- Rows used: 30 · Columns: 4
- Dataset kind: cross_section
- Categorical variable(s): region (dummy-coded in model)
- Note: variable importance is based on marginal (univariate) association with the outcome and may differ from multiva

Descriptive statistics

- wage (int64): mean=34.5000 std=8.8034 min=20.0000 max=49.0000 missing=0 unique=30
- education (int64): mean=19.0000 std=4.3944 min=12.0000 max=26.0000 missing=0 unique=15
- experience (int64): mean=9.5000 std=4.4237 min=2.0000 max=17.0000 missing=0 unique=16
- region (str): missing=0 unique=3

Interpretation

- In ols_1, region is a categorical variable (dummy-coded). Each coefficient represents the difference from the referenc
- In ols_1, holding other selected regressors constant, each one-unit increase in education is associated with an avera
- In ols_1, holding other selected regressors constant, each one-unit increase in experience is associated with an aver
- Model ols_1 (R^2) explains 100.0% of dependent-variable variation. [source: model_results.ols_1.r_squared] [confiden

Statistical tests (outcome-related)

- Spearman correlation: wage vs experience: Statistic 0.9984; p < 0.001. [source: statistical_tests.rank_correlations.sp
- Pearson correlation: wage vs experience: Statistic 0.9984; p < 0.001. [source: statistical_tests.correlations.wage.expe
- Spearman correlation: wage vs education: Statistic 0.9983; p < 0.001. [source: statistical_tests.rank_correlations.spe
- Pearson correlation: wage vs education: Statistic 0.9983; p < 0.001. [source: statistical_tests.correlations.wage.educa
- ANOVA: wage by education: Statistic 320.0000; p < 0.001. [source: statistical_tests.anova.wage.education]
- ANOVA: wage by experience: Statistic 280.0000; p < 0.001. [source: statistical_tests.anova.wage.experience]
- Kendall correlation: wage vs experience: Statistic 0.9838; p < 0.001. [source: statistical_tests.rank_correlations.kenda
- Kendall correlation: wage vs education: Statistic 0.9826; p < 0.001. [source: statistical_tests.rank_correlations.kendal
- Kruskal-Wallis: wage by education: Statistic 28.9032; p = 0.011. [source: statistical_tests.nonparametric.kruskal_walli
- Kruskal-Wallis: wage by region: Statistic 1.0323; p = 0.597. [source: statistical_tests.nonparametric.kruskal_wallis.wa
- ANOVA: wage by region: Statistic 0.4983; p = 0.613. [source: statistical_tests.anova.wage.region]

Other tests (+0 truncated)

- Spearman correlation: education vs experience: Statistic 0.9936; p < 0.001. [source: statistical_tests.rank_correlation
- Pearson correlation: education vs experience: Statistic 0.9934; p < 0.001. [source: statistical_tests.correlations.educa
- Kendall correlation: education vs experience: Statistic 0.9655; p < 0.001. [source: statistical_tests.rank_correlations.k
- ANOVA: experience by education: Statistic 80.0000; p < 0.001. [source: statistical_tests.anova.experience.education]
- ANOVA: education by experience: Statistic 70.0000; p < 0.001. [source: statistical_tests.anova.education.experience]
- Chi-square: education vs region: Statistic 60.0000; p < 0.001. [source: statistical_tests.chi_square.education.region]
- Kruskal-Wallis: experience by education: Statistic 28.6343; p = 0.012. [source: statistical_tests.nonparametric.kruskal
- Chi-square: education vs experience: Statistic 210.0000; p = 0.487. [source: statistical_tests.chi_square.education.ex
- Kruskal-Wallis: education by region: Statistic 1.0357; p = 0.596. [source: statistical_tests.nonparametric.kruskal_walli
- Kruskal-Wallis: experience by region: Statistic 0.9844; p = 0.611. [source: statistical_tests.nonparametric.kruskal_wal

- ANOVA: education by region: Statistic 0.5000; p = 0.612. [source: statistical_tests.anova.education.region]
- ANOVA: experience by region: Statistic 0.4932; p = 0.616. [source: statistical_tests.anova.experience.region]
- Chi-square: experience vs region: Statistic 18.0000; p = 0.959. [source: statistical_tests.chi_square.experience.regio

Warnings

- Column 'region' was detected as categorical and automatically dummy-coded.
